Best Practices

- ★ **Consider** offering extended practice hours to increase care access.
- ★ **Educate** patients on the importance of having at least one preventive care visit during each measurement year and maintaining a relationship with a PCP.
- ★ **Make** outreach calls and/or send letters to advise members of the need for annual visits, and remind patients of scheduled appointments via call or text.
- ★ **Do not provide** more than 12 months of refills for medications, require patients to be seen at least yearly for refills.
