

Kidney Health Evaluation for Patients with Diabetes (KED)

Measure Description

Assesses the percentage of patients 18–85 years of age with diabetes (type 1 and type 2) who received a kidney health evaluation, defined by an estimated glomerular filtration rate (eGFR) and a urine albumin-creatinine ratio (uACR), during the measurement year.

Numerator Compliance

Patients who received both an eGFR (Estimated Glomerular Filtration Rate Lab Test) and a uACR (Urine Albumin Creatinine Ratio Lab Test) during the measurement year on the same or different dates of service:

- At least one eGFR
- At least one uACR (Urine Albumin Creatinine Ratio Lab Test) identified by either of the following:
 - Both a quantitative urine albumin test and a urine creatinine test with service dates four days or less apart. For example, if the service date for the quantitative urine albumin test was December 1 of the measurement year, then the urine creatinine test must have a service date on or between November 27 and December 5 of the measurement year.
 - A uACR (Urine Albumin Creatinine Ratio Lab Test).

Best Practices

- ★ **Coordinate** care with patients' other providers.
- ★ **Ensure** documentation in the medical record includes the dates when the eGFR and uACR were performed and the results.
- ★ **Follow up** with patients to discuss and educate on lab results and effects of diabetes.
- ★ **Order** a diabetes screening test every year and build care gap "alerts" in your electronic medical record.
- ★ **Reschedule** outreach patients who cancel appointments as soon as possible.
